BIOGRAPHY

Currently I am a first-year Ph.D. student of College of Computer Science and Technology, Zhejiang University (<http://www.zju.edu.cn/>). Before my Ph.D. career, I was an undergraduate student from Wuhan University of Technology (<http://www.whut.edu.cn/>) and received my B.Eng. degree in Computer Science and Technology on June, 2019. In September 2019, I was admitted to study for a Ph.D. degree in Zhejiang University under the supervision of Prof. Shuiguang Deng (<https://person.zju.edu.cn/shuiguang>) without entrance examination.

EDUCATION

Bachelor of Engineering, Computer Science and Technology
Wuhan University of Technology, Wuhan, China

June 2019

Thesis - Research on Hand-written Digital Recognition in Edge Computing Environment

RESEARCH INTERESTS

I am interested in **Edge Computing**, **Cloud Computing** and **Mobile Computing**. Currently I am focusing on:

- **Computation Offloading.** Computation offloading is the transfer of resource intensive computational tasks to an external platform, such as a cluster, grid, or a cloud. Offloading may be necessary due to hardware limitations of a devices, such as limited computational power, storage, and energy. The resource intensive tasks may be for searching, virus scanning, image processing, artificial intelligence, computational decision making, etc. In the area of edge computing, it studies the load balancing of various computation and communication resources in the manner of edge server selection and frequency spectrum allocation.
- **Edge Intelligence.** Edge Intelligence is not the simple combination of Edge Computing and Artificial Intelligence. Actually, the subject of Edge Intelligence is tremendous and enormously sophisticated, covering many concepts and technologies, which are interwoven together in a complicated manner. Currently, the formal and internationally acknowledged definition of Edge Intelligence is non-existent. Innovatively, we divide Edge Intelligence into ijAI for edge_i/_j and jiAI on edge_i/_j. The former focuses on providing a more optimal solution to the key concerns in Edge Computing with the help of popular and resultful AI technologies while the latter studies how to carry out the entire process of AI models, i.e., model training and inference, on edge.

HONORS

Best Student Paper Award of the 2019 IEEE International Conference on Web Service, July 2019
Outstanding Graduate of Wuhan University of Technology, Jun 2019
The Excellence Award of Wuhan University of Technology, Oct 2018
