**Addr:** No. 38 Zheda Road, Xihu District,  
Hangzhou, China 310027

## BIOGRAPHY

Currently I am a first-year Ph.D. student of College of Computer Science and Technology, Zhejiang University (<http://www.zju.edu.cn/>). Before my Ph.D. career, I was an undergraduate student from Wuhan University of Technology (<http://www.whut.edu.cn/>) and received my B.Eng. degree in Computer Science and Technology on June, 2019. In September 2019, I was admitted to study for a Ph.D. degree in Zhejiang University under the supervision of Prof. Shuiguang Deng (<https://person.zju.edu.cn/shuiguang>) without entrance examination.

## EDUCATION

*Bachelor of Engineering*, Computer Science and Technology  
Wuhan University of Technology, Wuhan, China

June 2019

*Thesis* - Research on Hand-written Digital Recognition in Edge Computing Environment

## RESEARCH INTERESTS

I am interested in **Edge Computing**, **Cloud Computing** and **Mobile Computing**. Currently I am focusing on:

- **Computation Offloading.** Computation offloading is the transfer of resource intensive computational tasks to an external platform, such as a cluster, grid, or a cloud. Offloading may be necessary due to hardware limitations of a devices, such as limited computational power, storage, and energy. The resource intensive tasks may be for searching, virus scanning, image processing, artificial intelligence, computational decision making, etc. In the area of edge computing, it studies the load balancing of various computation and communication resources in the manner of edge server selection and frequency spectrum allocation.
- **Edge Intelligence.** Edge Intelligence is not the simple combination of Edge Computing and Artificial Intelligence. Actually, the subject of Edge Intelligence is tremendous and enormously sophisticated, covering many concepts and technologies, which are interwoven together in a complicated manner. Currently, the formal and internationally acknowledged definition of Edge Intelligence is non-existent. Innovatively, we divide Edge Intelligence into *AI for edge* and *AI on edge*. The former focuses on providing a more optimal solution to the key concerns in Edge Computing with the help of popular and resultful AI technologies while the latter studies how to carry out the entire process of AI models, i.e., model training and inference, on edge.

## HONORS

Doctoral Freshman Scholarship of Zhejiang University, Sep 2019

Best Student Paper Award of the 2019 IEEE International Conference on Web Service, July 2019

Outstanding Graduate of Wuhan University of Technology, June 2019

The Excellence Award of Wuhan University of Technology, Oct 2018
